

Golem is the first truly decentralized supercomputer, creating a global market for computing power. Combined with flexible tools to aid developers in securely distributing and monetizing their software, Golem altogether changes the way compute tasks are organized and executed. By powering decentralized microservices and asynchronous task execution, Golem is set to become a key building block for future Internet.

We invite you to join one of the most respected teams in the blockchain community. By developing a bleeding-edge technology we are determined to change the world for the better. Let's do it together!
